## EDUCATION

---

**California State University - Fullerton**

*Master's of Computer Science*

**August 2025 - Present**

**California State Polytechnic University - Pomona**

*B.S. Psychology; Member of Phi Kappa Tau Fraternity*

**August 2018 - May 2023**

## PROJECTS

---

### **"Magic: The Gathering" Deckbuilding Application**

Github: <https://github.com/ToroDDT/Java-MTG-Deckbuilder>

- Deployed a full-stack Magic: The Gathering deck-building application using Java, Spring Boot, PostgreSQL, and Docker. Developed a custom search engine enabling users to catalog and filter complex card datasets by market value, artist, set, card attributes, and user-defined tags, reducing duplicate purchases, lowering deckbuilding costs, and streamlining the deck-building process.
- Integrated third-party APIs and automated the discovery of game-winning conditions and card combos across users' collections and owned decks, providing users with rulings, strategy descriptions, and step-by-step guidance for executing winning conditions and combos, enabling users to build more competitive decks and win more games.
- Automated the export and submission of completed decks to local card shops and third-party marketplaces, streamlining deck purchasing
- Leveraged TDD, unit testing, and end-to-end testing to develop an interactive dashboard visualizing Magic: The Gathering deck statistics, card characteristics, and card legality validation. Implemented probability algorithms to calculate card draw probabilities and simulate opening hands, enabling users to analyze deck consistency and optimize gameplay performance.

### **Trading Card Image Recognition**

Github: <https://github.com/PDang176/mtg-ocr>

- Collaborated with teammates and implemented an OCR-driven Python application with a PostgreSQL backend, automating card name extraction from user-uploaded images to eliminate manual database entry.
- Developed a post-processing and computer vision pipeline using OpenCV and Levenshtein edit distance algorithms; increased text recognition accuracy from 70% to 90% for low-quality and poorly lit images.

### **Magic The Gathering Mobile Companion Application**

- Developed a Swift-based iOS application featuring mobile camera scanning to automate collection cataloging, utilizing the Scryfall API to parse complex card mechanics and return real-time judge rulings during live gameplay.

## SKILLS

---

**Skills:** Node.js, MySQL, MongoDB, SQL, Linux/Unix, HTML/CSS, MongoDB, Git, Agile, OpenAI, Data Structures and Algorithms, Full Stack, Backend, Frontend, Postgres SQL REST APIs, Spring, Spring Boot.

**Programming Languages:** Java, Python, [React.js](https://reactjs.org/), Javascript, HTML, CSS, SQL

## WORK EXPERIENCE

---

**America's Tire**

*Sales Apprentice*

**Upland, CA**

*August 2023 - Present*

- Responsible for training for all new hires, enforcing industry best practices for tire service and shop safety; acted as the primary point of contact for bay operations to minimize service errors and ensure 100% compliance with safety regulations and best practices.

## Organizations and Clubs

---

**Phi Kappa Tau**

*Secretary / Philanthropy Chair*

**Upland, CA**

*March 2022*

- Lead a fundraising event for The Painted Turtle charity, contributing to a record-breaking philanthropy week that secured \$15,000+ in donations through public events.
