

# David Del Toro

909-678-3057 | David.DDT@protonmail.com | Rancho Cucamonga, CA, USA | [LinkedIn](#) | [Portfolio](#)

## EDUCATION

---

**M.S. Computer Science | California State University, Fullerton**

Expected Graduation: May 2027

**B.S Psychology | California State Polytechnic University - Pomona**

## PROJECTS

---

**Trading Card Deckbuilder Platform** *Java (Spring Data, Spring Boot ), PostgreSQL, React, TypeScript, Docker, HTMX, Tailwind*  
[Magic: The Gathering Deckbuilding Application | GitHub](#)

- Built a card combo-discovery service that analyzes thousands of card interactions across 30,000+ cards, using concurrency, caching, and indexing to reduce latency from 7s to <200ms while identifying win conditions in user's decks. **Live Demo**
- Developed a probability-based deck optimization tool that runs 1,000+ Monte Carlo simulations per deck configuration to model opening hands, producing early-game probability scores used to evaluate the impact of adding or removing cards.
- Reduced page load times by 75% (from 2s to sub-500ms) by implementing caching and PostgreSQL indexing, reducing card search latency by 95% (from 1,000ms to 50ms) to enable real-time card filtering.
- Deployed a deckbuilding platform enabling players to manage 30,000+ cards with advanced search, filtering, and tagging, utilizing Test-Driven Development (TDD) and unit testing to prevent regressions and system reliability across all features.

**Trading Card Image Recognition** *Python (OpenCV), gRPC, PostgreSQL, and Docker*

[Python Image Scanner Microservice | Github](#)

- Built a computer vision OCR microservice that lets users catalog trading cards via image uploads, replacing manual entry.
- Exposed the system as a Python gRPC microservice and integrated it with a Java/Spring deckbuilder client using Protocol Buffers for real-time image-based collection updates.
- Improved OCR accuracy from 70% to 90% using OpenCV preprocessing and Levenshtein-distance-based fuzzy matching to detect card names from low-quality and poorly lit images.

## SKILLS

---

**DevOps/Tools:** Docker, Git, gRPC, Protocol Buffers, OCR

**Programming Languages:** Java, Python, JavaScript, TypeScript, Golang, CSS, SQL

**Frameworks:** Spring Boot, React, OpenCV, NodeJS

**Databases:** PostgreSQL

## WORK EXPERIENCE

---

**America's Tire**  
*Sales Apprentice*

**Upland, CA**  
*August 2023 - Present*

- Trained and onboarded new employees while serving as a primary point of contact for bay operations, maintaining safety compliance and reducing service errors through standardized procedures.

## Organizations and Clubs

---

**Phi Kappa Tau**  
*Secretary / Philanthropy Chair*

**Upland, CA**  
*March 2022*

- Led a fundraising event for The Painted Turtle charity, contributing to a record-breaking philanthropy week that secured \$15,000+ in donations through public events.
